

5 REASONS TO CHOOSE R-VALUE HOMES

1. UNCOMPROMISING

Every builder has a niche; an area in which they excel, something they do better than anyone else. Some are great at delivering a lot of space for a lower price, some are fast, while others specialize in multi-million dollar homes.

We meticulously focus on the things that matter most to you and your family: Comfort, Health, Efficiency, and Durability. Yes, it takes more effort; but ask any of our clients and you will find the results are unlike anything they have experienced. Our TBL2 building process takes the guesswork out of Green Building, ensures your needs are front and center, and delivers exceptional results.

2. COMFORT

QUIET

Whether by a busy highway or in the middle of an 80 acre field, everyone appreciates the peace and privacy our homes are known for. Wood homes shake and creak in the wind, offering little more than basic shelter; but a concrete home silently protects its occupants.

CONSISTENT

Imagine even temperatures room to room, never feeling a chill near large windows, and not having to change the thermostat based on the weather. When you build with us, we deliver consistent comfort throughout the home, all the time. When your home maintains proper humidity; itchy skin, static electricity, and even many airborne allergies are things of the past.

3. HEALTH

SAFE

Our homes feature safety and security that far exceed nearly ALL other methods of construction. Wildfires, high winds, brownouts and blackouts, floods, gas leaks, carbon monoxide, and the list goes on. A home built by R-Value gives you greater protection from all these and more.

AIR QUALITY

Would you believe that many homes rely on the weather for fresh air?! On a breezy day, air exchange contributes to discomfort and high energy bills; but when all is calm, stale air is the result. Our homes deliver a measured supply of what you need; removing stale air, toxins, and airborne allergens while providing fresh, healthy air that you will LOVE!

4. DURABILITY

At each step of our building process, we consider the longevity, durability, and quality of the materials we use. The most environmentally friendly home is one that doesn't need major repairs every 20 years.

5. EFFICIENCY

When we reimagine a house from the ground up as a place that improves your comfort and health for generations, the natural result is incredible efficiency. Responsible building delivers ultra-low energy bills you can take to the bank!
